CLINICAL DISCHARGE SUMMARY

Sample / illustrative record — fictional patient, generated for demonstration only

1. Patient Snapshot

Name	Sample Patient	Mobile	+91-98765-43210
Age	32 years	Room type	Private (AC)
Guardian	Mr. Rajesh Sharma (Husband)	Consultant	Dr. Sample, Sr. Consultant – Internal Medicine
Insurance	Yes	Invoice No.	968984

Residential address: 56 Sample Residency Road, Sample Nagar, Sample City, Tamil Nadu 400003

2. Admission Window

Admitted On 26-09-2026	Discharged On 01-10-2026	Ward Private Room
---------------------------	-----------------------------	----------------------

3. Why the Patient Was Admitted

Acute gastroenteritis with dehydration. Patient reported frequent loose stools, vomiting, and low-grade fever over the preceding two days, with reduced oral intake and generalised weakness on presentation.

4. What Was Done in Hospital

On examination, the patient was mildly dehydrated with stable vitals. Blood, stool, and urine analyses were carried out to rule out other causes and confirm the clinical picture. The patient was started on IV fluid therapy (saline and ORS) along with antibiotics to manage the infection, and was kept under continuous nursing observation for the duration of the stay. Symptoms settled steadily, and oral intake was reintroduced without difficulty.

Care Provided	Detail
IV Fluid Therapy & Medications	Saline, ORS, Antibiotics
Laboratory Workup	Blood, Stool, Urine Analysis
Nursing Support	Round-the-clock, throughout stay

5. How the Patient Is Doing Now

Afebrile and hemodynamically stable at discharge. Tolerating oral fluids and a light diet well, with no further episodes of vomiting or loose stools in the 24 hours prior to discharge. Ambulatory and comfortable.

6. Take-Home Medicines

— Tab. Ondansetron 4 mg — as needed for nausea, up to 3 days

- Oral Rehydration Solution — continue as needed for 5 days
- Tab. Paracetamol 500 mg — as needed for fever, up to 3 days
- Probiotic capsule — once daily for 5 days

7. Advice for Home Care

- Stick to a light, easily digestible diet (khichdi, curd rice, bananas) for 3–4 days
- Avoid oily, spicy, or street food until fully recovered
- Keep up fluid intake through the day
- Resume normal activity gradually, as tolerated

8. Follow-Up & Red Flags

Scheduled review with Dr. Sample after 5 days. Seek immediate medical attention in case of pain, painful movements, redness, pus, bleeding, persistent vomiting, high fever, or blood in stools — do not wait for the scheduled follow-up if any of these occur.

This is a fictional, illustrative discharge summary generated for demonstration purposes only. The patient, consultant, and clinical narrative are invented and do not correspond to any real person or event. Not valid for medical, legal, insurance, or billing use.
